Mohammad Nabi Noorzai

Software Engineer | Full-Stack Web Developer

San Diego, CA | mnoorzai21@gmail.com | linkedin.com/in/mnoorzai21 | github.com/mnoorzai21 | mnoorzai.vercel.app

SUMMARY

Computer Science graduate (SDSU, Dec 2024) who builds and ships tested, full-stack web apps with React, Next.js, TypeScript, Node.js and GraphQL. Seeking software engineering, frontend or full-stack roles, remote or hybrid (San Diego).

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, Java, C/C++, SQL, HTML, CSS
Frontend	React, Next.js, Tailwind CSS, Vite, Apollo Client, Bootstrap, responsive and accessible design
Backend	Node.js, Express, REST APIs, GraphQL (Apollo Server), JWT authentication
Databases	MongoDB (Mongoose, Atlas), MySQL
Testing & DevOps	Node test runner, Playwright, GitHub Actions CI/CD, Git, Vercel, Render, GitHub Pages, Linux

EXPERIENCE

Independent Software Developer — San Diego, CA

Full-Stack Web Development — July 2025 – Present

- Designed, built and deployed full-stack JavaScript and TypeScript applications end to end, including a real-time stock scanner, a GraphQL book search app and a Next.js/TypeScript portfolio with Playwright end-to-end tests.
- Ran each project like a production team: feature branches, pull-request reviews, automated tests and CI/CD to Vercel, Render and GitHub Pages.

Sheek Media — San Diego, CA

Frontend Developer — Dec 2024 – June 2025

- Built reusable React components (navigation, forms, content sections) and assembled them into responsive, mobile-first websites for client projects.
- Diagnosed and fixed cross-browser and responsive layout bugs using Chrome DevTools, so sites displayed correctly on phones, tablets and desktops.
- Tested new features across browsers and devices before each release, catching bugs early and keeping production deployments stable.

PROJECTS

Stock Scanner — mnoorzai21.github.io/stock-scanner

React, Vite, Node.js, Express, market data APIs

- Built a real-time momentum scanner that screens ~10,000 U.S. stocks every minute on five filters (price, % gain, relative volume, share float, news) and sends sound and desktop alerts.
- Cut market-data API calls per candidate from 21 to one batched request and added server-side caching, so full scans typically finish in under 10 seconds and multiple viewers share one result.
- Fixed a premarket bug that measured gains against the wrong previous close; added 46 automated tests and CI/CD to GitHub Pages and Render.

Book Search — mnoorzai21.github.io/book-searchjet-mnn

React, Apollo GraphQL, Express, MongoDB Atlas, JWT, GitHub Pages, Render

- Full-stack reading-list app with JWT/bcrypt auth, a GraphQL API and cached server-side Google Books search; 12 API tests run in CI on every pull request.
- Split the deployment (GitHub Pages frontend, Render API with a CORS allow-list), fixed a production-only login redirect bug and patched a high-severity dependency vulnerability.

EDUCATION

San Diego State University — B.S. Computer Science, GPA 3.5 — Dec 2024

Relevant coursework: Software Engineering, Data Structures & Algorithms, Operating Systems, Computer Architecture

San Diego Mesa College — A.S. Computer Science

University of California San Diego — Certificate, Web Development
