Mohammad Nabi Noorzai

Software Engineer | Full-Stack Web Developer

San Diego, CA | mnoorzai21@gmail.com | linkedin.com/in/mnoorzai21 | github.com/mnoorzai21 | mnoorzai.vercel.app

SUMMARY

Computer Science graduate (SDSU, December 2024) who builds and ships full-stack web applications with React, Next.js, TypeScript, Node.js and GraphQL, including a real-time stock market scanner. Writes tested code with CI/CD and is seeking software engineering, frontend or full-stack roles, remote or hybrid/on-site in San Diego.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, Java, C/C++, SQL, HTML, CSS
Frontend	React, Next.js, Tailwind CSS, Vite, Apollo Client, Bootstrap, responsive and accessible design
Backend	Node.js, Express, REST APIs, GraphQL (Apollo Server), JWT authentication
Databases	MongoDB (Mongoose, Atlas), MySQL
Testing & DevOps	Node test runner, GitHub Actions CI/CD, Git, Vercel, Render, GitHub Pages, Linux

EXPERIENCE

Sheek Media — San Diego, CA

Frontend Developer — Dec 2024 – June 2025

- Built reusable React components and developed responsive websites for company projects.
- Debugged and fixed front-end issues across browsers and screen sizes, improving site reliability.
- Tested new features before release to catch bugs early and keep deployments stable.

PROJECTS

Stock Scanner — mnoorzai21.github.io/stock-scanner

React, Vite, Node.js, Express, market data APIs

- Built a real-time momentum scanner that screens ~10,000 U.S. stocks every minute on five filters (price, % gain, relative volume, share float, news) and sends sound and desktop alerts.
- Cut market-data API calls per candidate from 21 to one batched request and added server-side caching, so full scans typically finish in under 10 seconds and multiple viewers share one result.
- Fixed a premarket bug that measured gains against the wrong previous close; added 31 automated tests and CI/CD to GitHub Pages and Render.

Book Search — mnoorzai21.github.io/book-searchjet-mnn

React, Apollo GraphQL, Express, MongoDB Atlas, JWT, GitHub Pages, Render

- Full-stack reading-list app with JWT/bcrypt auth and saved books, backed by a GraphQL API and cached server-side Google Books search.
- Split the deployment (GitHub Pages frontend via GitHub Actions, Render API with a CORS allow-list) and fixed a production-only login redirect bug.
- Patched a high-severity dependency vulnerability and upgraded to React Router v7; 12 API tests run in CI on every pull request.

Developer Portfolio — mnoorzai.vercel.app

Next.js, TypeScript, Tailwind CSS, Vercel

- Built a responsive, accessible portfolio whose projects, skills and links render from typed TypeScript data files, with SEO metadata and a statically rendered home page.
- Developed through feature branches and reviewed pull requests with lint checks; Vercel deploys every merge to main automatically.

EDUCATION

San Diego State University — B.S. Computer Science — Dec 2024

Relevant coursework: Software Engineering, Data Structures & Algorithms, Operating Systems, Embedded Systems, Computer Architecture

San Diego Mesa College — A.S. Computer Science

University of California San Diego — Certificate, Web Development
